

# Supplemental Labeling

**FOR DISTRIBUTION AND USE ONLY WITHIN IDAHO**

**EPA Reg. No. 241-418**

**EPA SLN No. ID- 030017**

## **FOR WEED CONTROL IN PERENNIAL GRASSES GROWN FOR SEED PRODUCTION**

**THIS LABEL EXPIRES DECEMBER 31, 2006**

**FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS, WORKER PROTECTION STANDARD REQUIREMENTS, AND PRECAUTIONS ON THE EPA REGISTERED LABEL.**

**For application to established (6 or more tillers per plant) Kentucky bluegrass, tall fescue, orchardgrass, perennial ryegrass, bentgrass or fine fescue fields.**

### **DIRECTIONS FOR USE**

This labeling must be in the possession of the user at the time of herbicide application.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. **PROWL H<sub>2</sub>O herbicide applied according to this label, prior to weed emergence, will control annual bluegrass, volunteer fescue, and volunteer ryegrass in addition to the weeds listed on the PROWL H<sub>2</sub>O herbicide label.** It may be necessary to control weeds that have germinated prior to the application of **PROWL H<sub>2</sub>O** with an alternative herbicide that has postemergence activity on those weeds. Weed control can be enhanced by using sequential applications of other registered pesticides.

**PROWL H<sub>2</sub>O** may cause temporary injury to grass stands. Diseases, extremely cold weather, drought, extensive frost heaving, low or high pH, or salinity may weaken stands and make them more susceptible to herbicidal damage.

**Apply at the beginning of significant fall rains and prior to weed germination.** Uniformly apply 4.2 to 6.3 pints of **PROWL H<sub>2</sub>O** per acre in 10 or more gallons of water per acre with ground equipment. The higher application rate should be used where heavy weed seedling or volunteer seedling infestations are anticipated.

**PROWL H<sub>2</sub>O treatments are most effective when adequate rainfall or overhead irrigation is received within 7 days after application.** Effectiveness of **PROWL H<sub>2</sub>O** may be increased by removal of excess straw and crop residue by such methods as crew cutting, propane flaming, or open field burning when local regulations allow.

(See reverse side)

## CHEMIGATION APPLICATION

**PROWL® H<sub>2</sub>O** may be applied through sprinkler irrigation systems including center pivot, lateral move, side (wheel) roll, solid set, or hand move irrigation systems. For complete instructions and precautions regarding chemigation refer to the main leaflet label for **PROWL H<sub>2</sub>O**.

Prior to weed germination, uniformly apply 4.2 to 6.3 pints of **PROWL H<sub>2</sub>O** per acre through sprinkler irrigation systems.

If soil condition is extremely dry, a pre-chemigation irrigation of 1/4-1/2 inch is recommended to enhance the incorporation of **PROWL H<sub>2</sub>O**. Chemigate as soon as possible after the pre-chemigation irrigation.

## RESTRICTIONS

DO NOT apply more than 6.3 pints of **PROWL H<sub>2</sub>O** per crop season. DO NOT apply if surface water is present. DO NOT apply when wind conditions favor spray drift.

DO NOT apply this herbicide within 1 year (365 days) of harvesting grass hay.

DO NOT harvest treated grass for feed or allow livestock to graze treated areas.

### Rotational Crop Restrictions

Any crop labeled for **PROWL H<sub>2</sub>O** preplant incorporated (PPI) use can be planted the same year without adverse effect.

For **PROWL H<sub>2</sub>O** use rates up to 4.3 pints/acre: Wheat may be planted 12 months following a **PROWL H<sub>2</sub>O** application. Other crops may be planted 18 months following an application of **PROWL H<sub>2</sub>O**.

For **PROWL H<sub>2</sub>O** use rates up to 6.3 pints/acre: Crops other than sugar beets, red beets, and spinach may be planted 18 months following application. Sugar beets, red beets, and spinach may be planted 24 months after application.

Refer to the **PROWL H<sub>2</sub>O** herbicide leaflet label for additional rotational crop restrictions.

## DISCLAIMER

**THE USER ASSUMES ALL RISKS AND CONSEQUENCES ASSOCIATED WITH APPLICATIONS OF PROWL H<sub>2</sub>O TO PERENNIAL GRASSES GROWN FOR SEED PRODUCTION.**
